## **AOMEI Centralized Backupper**

*Say "NO" to Data Loss*

## AOMEI Centralized Backupper Introduction

AOMEI Centralized Backupper, a reliable centralized backup management solution that enables you to manage backups for all PCs, workstations, servers and virtual machines within LAN from a single central management computer. The entire backup and restore process on all clients can be monitored in real time on AOMEI Centralized Backupper. Disks, partitions, folders or files in the target computers can be backed up to a specified location. In addition, with the powerful scheduled task function, you only need to set up once, and the backup will be performed automatically according to your settings. Not only that, you can set the backup scheme to manage backups, it will automatically delete old backups regularly, and always keep the number of backups you specify.

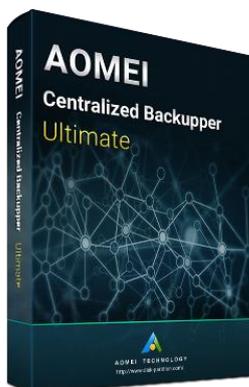

### Main Functions:

- Backup Options: file backup & Sync, system backup, disk/partition backup, etc.
- Support schedule backup with full, incremental backup and differential backup.
- Support dissimilar hardware restore.
- automatically delete old backup images based on specified value.
